Work in other media

Writer of software incorporated into the two leading computational algebra, systems **GAP** and **MAGMA**. Contributions include:

- Software to compute power-conjugate presentations for p -quotients of finitely-presented groups; compute extensions of p -groups; automorphism groups; decide whether two presentations determine isomorphic p -groups.
- Software for work with linear groups; includes finding decomposition of a matrix group with respect to a normal subgroup; investigating whether such groups are primitive; deciding tensor decompositions.
- Software for random element generation and selecting base points for matrix groups.
- Libraries of data on p -groups and groups of small order.
- (with A. Detinko and D.L. Flannery) Software to decide Tits Alternative and other structural questions for groups defined over infinite domains.
- (with H. Bäärnhielm, D.F. Holt, and C.R. Leedham-Green) Composition-Tree package providing access to complete implementation of COMPOSITIONTREE algorithm.
